

Performance Driven

Chet Morrison Contractors

The people of Chet Morrison Contractors are performance-driven at every level—from a committed and capable management group, to world-class teams of seasoned construction, fabrication, diving and pipeline professionals.

# PIPELINE

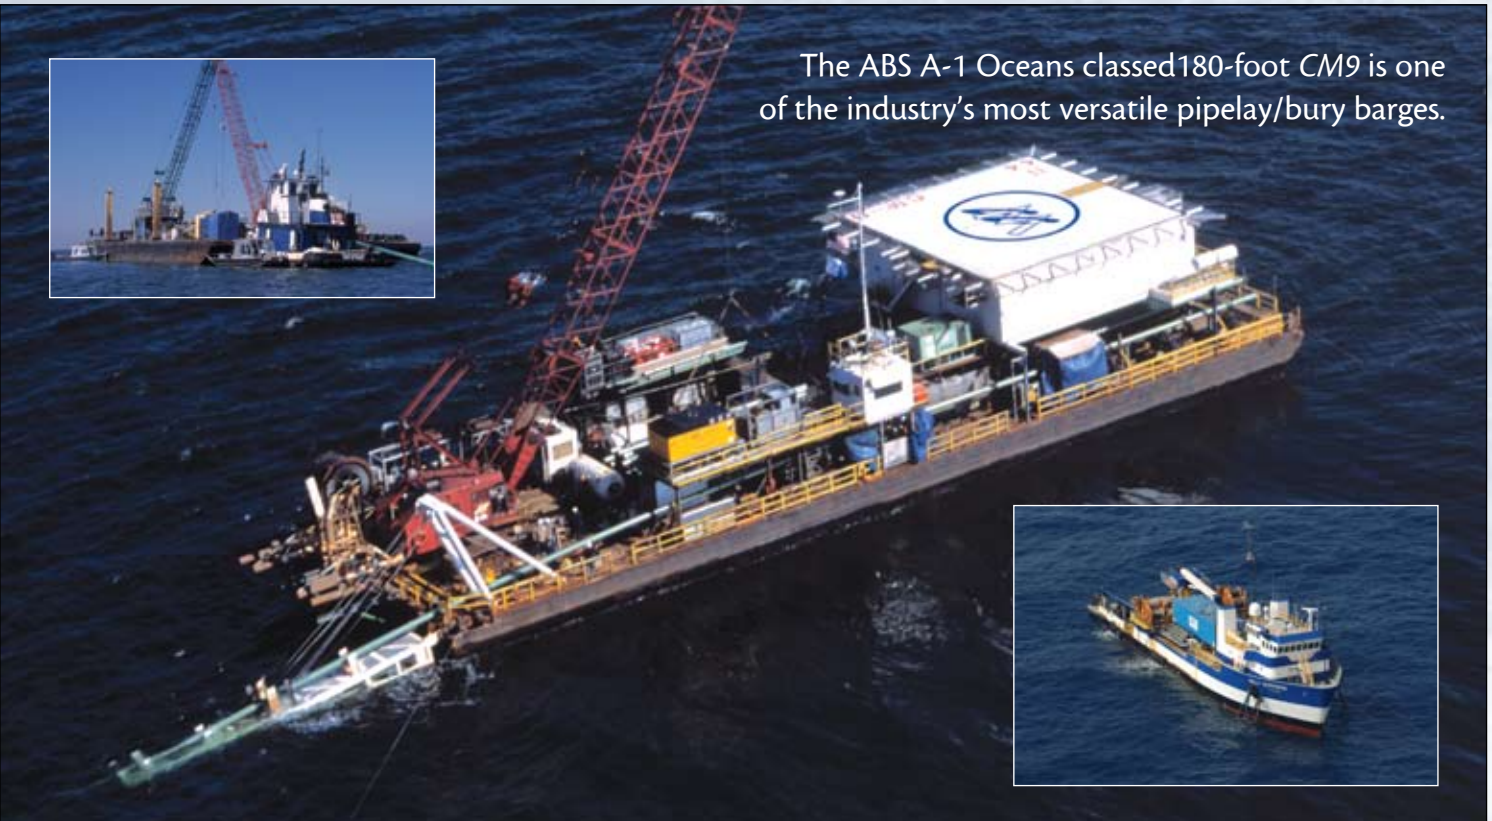

Chet Morrison Contractor's Pipeline Division provides installation and repair on infield flow lines and transmission lines all along the Gulf Coast. Our fleet of vessels works offshore from South Texas to Florida, contracting to assure that your oil and gas production gets to market. Our seamless approach integrates the inland and offshore pipeline projects – from the shallow waters of lakes and bays throughout the Gulf Coast region, to the deep blue waters of the Gulf of Mexico and beyond.

Flagship pipelay vessels **CM9**, **CM11** and **CM15** feature state-of-the-art accommodations and efficient workstations. Pipeline production lines are well-equipped to assure quality installations for 24-hour operation in variable weather conditions. The **CM15** is outfitted with a saturation diving system, offering customers the unique option of installing a pipeline and performing the tie-ins from a single dispatch.

The CMC motor fleet provides full-range diving and diving support services. The pride of the dive support fleet is our 2008 addition. The DSV **Joanne Morrison**, measuring 240' x 48', is outfitted with four-point mooring capabilities, a 24"-diameter working moon pool and a four-man 1,000' saturation diving system. It carries a Mantis 70-ton hydraulic crane and accommodates 54 personnel. DSVs **Stephanie Morrison** and **Kelly Morrison** each accommodate 35 personnel and have a 40-ton hydraulic crane. The **Stephanie Morrison's** double-deck configuration allows for support equipment, diving chambers, compressors and bells to be stored on the lower deck, leaving the upper deck open for material storage and the fabrication of pipeline components. The **Kelly Morrison** is designed with below-deck air compressors and jet pumps to leave the main deck available for material storage and fabrication of its pipeline components. To further expand our range and meet customer requirements, the 110' DSV **Pipeline Surveyor** was introduced. It quarters 19 personnel and has a three-point anchoring system and a 5-ton hydraulic crane. It operates in shallow water, performing light construction, pipeline repair, pigging and pipeline commissioning and decommissioning.

The 175' **Caroline Morrison** is our offshore supply vessel. It complements CMC's fleet by providing field support, production material transportation and field equipment repair services.

CMC's single link between pipeline operations and support, the commitment to safety, the flexibility and variety of its equipment, and the ability to transition easily from shallow to deep water makes Chet Morrison Contractors the single-source solution for your next pipeline project.

The ABS A-1 Oceans classed 180-foot **CM9** is one of the industry's most versatile pipelay/bury barges.

The 196-foot *CM11* easily transitions between shallow coastal waters and deeper offshore waters.

# CONSTRUCTION

From swamp and marsh sites to the outer depths of the oceans, wherever oil and gas is extracted, wherever infrastructure is built or maintained, Chet Morrison is there. From wellheads, to gathering and processing facilities, to pumping and transmission stations, CMC is a proven performer. The integration of support services and the concentration of project-specific resources make CMC a cost-effective solution. Internationally, the company has worked in Africa, Mexico, the Caribbean, Trinidad and the offshore waters of Brazil, and will continue to expand its presence into other countries while broadening its list of services.

Chet Morrison Contractors is experienced in heavy marine construction and structural installations, process piping, pile driving, equipment hookups and all types of refurbishment and rehabilitation projects. And it continues to grow with the introduction of new services. Civil Work is now a part of our Inland Services, and Riser Services occupies a separate facility as it continues to expand. The introduction of Chet Morrison Well Services brought well intervention, hydraulic workover and plug and abandonment services into the fold. With experienced personnel, custom equipment and an outfitted 54' x 150' keyway barge, our services have been on target within the industry. The added value of these capabilities is yet another measure of a single-source, cost-effective solution.

With so many significant resources to draw upon in meeting exacting project requirements – including support vessels, heavy-lift crawlers, painting crews and equipment, specialty welding and amphibious excavation equipment, CMC's project managers can meet the challenges.

Behind it all is the Chet Morrison commitment to safety and environmental consciousness. This combination of equipment, HS&E, creativity and experience allows CMC to fast-track projects and safely complete them on time and on budget.

The 185-foot DSV *Stephanie Morrison*'s double deck configuration allows for support equipment, diving chambers, compressors and bells to be stored on the lower deck, leaving the upper deck free for materials and fabrication.

## FABRICATION

Chet Morrison Contractors has a proven track record in fabrication, sandblasting, painting and welding at its four purpose-designed, workflow efficient facilities. CMC has a specialty repair and marine fabrication yard in Alvarado, Mexico, two domestic energy-related fabrication yards in Harvey and Houma, Louisiana, and operates an additional facility in Trinidad and Tobago.

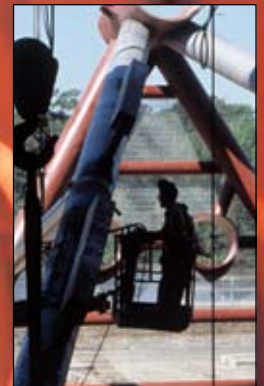

Domestically, the two South Louisiana waterfront facilities have convenient access to the Gulf of Mexico. The covered fabrication space and overhead shop cranes allow for 24-hour scheduling and ease of material handling. Each yard has well-equipped paint facilities and on-site yard cranes for heavy load-outs. A special characteristic of the Houma yard is a 210-foot by 150-foot wet slip to accommodate material barges of up to 300 feet. The Harvey yard is a certified ASME U and R Stamp facility located on the Harvey Canal. Additionally, CMC's services in sandblasting and painting are offered at onshore and offshore customer locations.

Internationally, the two locations offer a broad range of fabrication and construction capabilities. An experienced ship repair and marine fabrication workforce staffs the 40-acre multi-use facility located in Alvarado, Mexico. Construction is under way on a new Floating Dry Dock with a 7,700 long ton lifting capacity. Scheduled to be operational by mid-2009, this new addition measures 270' long with a 130'6" beam and 112'6" width between wing walls, and will expand the company's ability to provide barge and ship construction and repairs in Mexico. The facility's infrastructure includes abundant under-roof fabrication, storage and painting accommodations, enhancing the resources available to dock customers. Trinidad Offshore Fabricators, known as TOFCO, is operated by CMC and specializes in the fabrication and construction of industry facilities. New to its location in 2009 will be a Brace Fabrication site located on an additional 16 acres. The site will be fully equipped for plasma and oxy-fuel cutting and will use specialized welding equipment. Located on the Gulf of Paria in South LaBrea, marine access is unrestricted by navigational height and width constraints. Both facilities offer offshore services and repairs, and 24-hour scheduling.

Whether your project requires a newbuild or refurbished facility or vessel completed to your demanding specifications, Chet Morrison's fabrication specialists and project managers will go the extra mile. Matching your needs to our locations and expertise means quality projects delivered safely and on-schedule.

Sandblasting, painting, welding and heavy load-out services are available in New Orleans and Houma in workflow efficient yards designed for specialized fabrication.

# INTEGRATED SOLUTIONS

Integrated solutions throughout the life of your project. This is the focus of the Chet Morrison Contractors' performance-driven team. To this end, we will continue to expand our services, our fleet, our facilities and our equipment to deliver on our promise of single-source, cost-effective solutions.

We will continue to place extraordinary emphasis on safety and training in order to provide the industry's most seasoned, most capable personnel. We will continue a single-minded commitment to quality which is the source of our reputation as a performance-driven company. We will continue to respond quickly in matching versatile resources to exacting project requirements. We will continue our expansion of services throughout the Gulf of Mexico, the Caribbean and Latin America. We will also continue to conduct all client communications with honesty and integrity.

When you choose Chet Morrison Contractors, you've selected experienced people, versatile assets, and a corporate philosophy dedicated to client satisfaction. This combination translates into a valuable strategic resource for your next project.
